When Performance and Reliability Matter!

When P.J. Ash of Lexington Kentucky decided to build his P-47 for Top Gun, he knew exactly what engine he wanted for maximum performance and reliability! P.J. only had four months to complete his plane for Top Gun and he knew that he did not have time to make mistakes. When it came to an engine choice, he needed something that would be reliable, cost effective, and have the power to pull the huge 102' bird through the maneuvers. The Q-100 from Quadra Arrow International was the only logical choice!

“In competition, you have to be your best and fly your best. No excuses! It is my responsibility to make sure everything on my plane performs to its maximum potential. In many cases, you don’t have time to fix problems at the last second. When I decided to choose an engine for my competition plane, I chose the Quadra 100. Why? Because I know that when I turn the plane on and flip the prop, this engine is going to start and run! That’s the reliability I need! Followed by ease of maintenance, great price, and Quadra’s great customer support, why would I go anywhere else!”
